

## Instructions to finish the installation manually after a failure of the automatic installation

---

**Important note:** *The following instructions are to check out the first tag (v7p2r2) of the v7p2 version. If you wish to work with a different version, edit all commands, paths, names and the configuration file with the version you wish to use.*

### 1. Open the DOS prompt command

If you do not know where the prompt command is, go to the Windows start menu and type "**cmd**" in the "Search programs and files" box. (see picture on the right)

### 2. Check out the TELEMAC source code

From the DOS prompt command, run the following command:

```
svn co http://svn.opentelemac.org/svn/opentelemac/tags/v7p2r2  
"C:\opentelemac-mascaret\v7p2" --username ot-svn-public --password telemac1*
```

**Note:** The download could last more than 20 minutes depending on the quality of the internet connection. **Note:** If the checkout crashed you do not have to start again just type `svn update` in the `v7p2r2` folder to carry on the download.

### 3. Copy configuration file

Save the configuration file as **system\_v7p2.cfg** in C:\opentelemac-mascaret\v7p2\configs.

Here are the configuration files for v7p2: [configuration file v7p2](#)

for v7p0 : [configuration file](#)

4. Create a shortcut of the DOS prompt command on your Desktop

5. Rename it "Telemac v7p2"

6. Edit the properties of the new shortcut

- Click right on the shortcut and edit the properties. The properties window should pop up (see picture on the right)

- In the **Target** box, copy/paste the following path next to what is already there, separated by a space.

```
/E:0N /V:0N /K set
SYSTELCFG=C:\opentelemac-mascaret\v7p2\configs\systeml_v7p2.cfg &&
PATH=C:\opentelemac-mascaret\v7p2\scripts\python27;!PATH!
```

- In the **Start in** box, delete the path and replace it by C:\opentelemac-mascaret\v7p2
- Click OK

## 7. Compile the TELEMAT system

Double click on the Telemac v7p2 shortcut you created and run the following command:

```
compileTELEMAT.py
```

Note: The compilation can last more than 30 minutes depending on the characteristics of your computer
