

New version features [links from Wikis of the TELEMAC system](#)

Introduction

Developments of the TELEMAC system are packaged within version numbers, such as v6p1, which was launched in July 2011. More often than not new developments come with new user keywords.

In the past, manuals were not updated for every new release but only for major versions, such as going from v5p9 to v6p0. This part of the [Wikis of the TELEMAC system](#) groups short notes produced annually for users to track the details of new features and keywords in between major releases.

Since open source distribution

- proposed features v6p4: [telemac2d](#), [telemac3d](#), [tomawac](#)
- new features v6p3: [general](#), [sisyphe](#), [telemac2d](#), [telemac3d](#), [tomawac](#)
- new features v6p2: [general](#), [telemac2d](#), [telemac3d](#)
- new features v6p1: [general](#), [sisyphe](#), [telemac2d](#), [telemac3d](#)
- new features v6p0: [general](#)

Before open source distribution

- new features v5p9: [general](#), [telemac3d](#)
